ESME
Cairo Student Chapter

2026

HISTORY
2015:2023

PREPARED BY
AHMED ABBAS
ESME PRESIDENT 2026

PREPARED FOR
PROF.EISSA MOHAMMED SHAQIR

Metallurgical and Advanced Materials Engineering Student at
Faculty of Petroleum and Mining Engineering,Cairo University.

GET TO KNOW US

ESME
Cairo Student Chapter

ABOUT OUR CHAPTER

ESME is an abbreviation of "Egyptian Society of Materials Engineers". It is the first scientific society oriented to metallurgical and
materials engineering students in Egypt and North Africa region.
ESME was founded in 2009 at the faculty of Petroleum and
Mining Engineering, Suez University.
After five years of evolution, ESME became a unique student
chapter and exceeded the limit of 70 active members and still
attracting more.
ESME Cairo is our first branch founded for both metallurgical and mechanical engineering students at Cairo university.

ESME is dedicated to qualifying "Materials Engineering Students" to suffice the job market with professional fresh graduates who can Bridge the gap between real science & technology opportunities in the fields of QA/QC engineering ,material engineering ,corrosion engineering ,welding ,steel making ,metal processing and industrial safety.
We take responsibility for building our members' character by both improving their soft skills and enhancing their technical knowledge.
Our belief in leadership skills for engineers is firm. Simply, leadership is the only way to fulfill prosperous careers, so we build leaders and actuators who can change the reality with their teams.

THANKS AND APPRECIATION

"ESME Cairo" proudly affirms its role as an incubator for excellence and leadership in engineering, and honours its affiliation with the prestigious Faculty of Engineering, Cairo University, a symbol of distinguished academic heritage.

Dr. Mohamed Ibrahim

Eng. Mostafa El Deeb

Eng. Karam-Allah Elsawy

This statement celebrates former Chapter members who, having achieved the highest academic and professional standards, now represent the pinnacle of excellence as Doctors and Teaching Assistants (Academics) at the Faculty. The Chapter's contribution to refining their skills and building their professional character was a significant factor in their journey to leadership.

These alumni embody the standards of quality and distinction we strive to establish. Notable examples from the Department of Metallurgical Engineering, who have elevated the standing of both the Faculty and the Chapter, include:

- Dr. Mohamed Ibrahim
- Eng. Mostafa El Deeb
- Eng. Karam-Allah Elsawy

TIME PERIODS

2021:2022

This period prioritized specialized skill development through Safety Engineer Workshops and Petroleum Drilling Safety Training, often in partnership with the CDC, ensuring relevance to the modern job market.

2019:2020

Activities centered on career preparation, including a Major Field Trip to Ezz Steel and the organization of the Annual Job Fair, effectively bridging students with the professional market.

2017:2018

Focus shifted to expansion and collaboration, featuring joint events with ESME and ASME, and hosting the Second EISC Conference (EISC 2), significantly boosting the Chapter's profile.

2015:2016

This period established the Chapter's base, highlighted by the First Conference (EISC), key Field Trips, and initial Specialized Training, successfully linking academic theory with practical industry application.

HISTORY
2015:2016

Type of Activity	Activity Name	Date	Additional Notes
Field Trip	Field Trip	2015	Educational Field Trip
Conference/ Event	Welcome party of The First Conference EISC	2015	Welcome ceremony for the First EISC Conference
Conference/ Event	Event Sponsors EISC (ESME & Iron & Steel)	2016	Sponsorship Event (Sponsored by Iron & Steel)
Workshop	Workshop of Software & Materials property data	2016	Workshop on software and material properties data
Media Coverage	Media Coverage	2016	Media coverage of the chapter's activities
Field Trip	Field Trips Grascom Welding & Inspection	2016	Educational trips on welding and inspection
Training	Training (Health Profession/Safety)	2016	Training (Likely related to Occupational Safety and Health)

ESME CU SC

HISTORY
2017:2018

Type of Activity	Activity Name	Date	Additional Notes
Conference/ Event	Event ESME & ASME	2017	Event in collaboration with ESME and ASME societies
Conference/ Event	Materials and Mechanics Engineering Department	2017	Event specific to the Materials and Mechanics Engineering Department
Conference/ Event	(EISC)	2017	Conference or event related to EISC
Conference/ Event	(EISC2)	2018	The Second EISC Event or Conference

HISTORY
2019:2022

Type of Activity	Activity Name	Date	Additional Notes
Field Trip	Field Trip Ezz Steel	2019	Educational trip to Ezz Steel company
Conference /Event	Event (EISC; Conference)	2019	EISC Conference or Event
Exhibition	Job Fair On Fair	2020	Organization of a job fair
Event	CDC Event	2022	Event in collaboration with the Career Development Center (CDC)
Workshop	Workshop Safety Engineer Job	2022	Specialized workshop on the Safety Engineer profession
Training/Course	Safety for petroleum drilling and Services AGBSK Engineering	2023	Training or course in safety for petroleum drilling and services in collaboration with AGBSK Engineering

ESME POST INSIGHTS REPORT

PRESENTED BY

ESME CU

ESME-Cairo University

ESME
Cairo University Student Chapter
BE POSITIVE VALUABLE

ESME Post Insights Report

A concise performance report showing how ESME-Cairo University posts drive views, reach, and engagement.

Total views	Avg. views/post	Interactions	Core age
43,217	10,804	2,232	18–24
4 analyzed posts	Strong baseline	All actions	64.8%

Headline finding

People-centered content is the main driver of views.

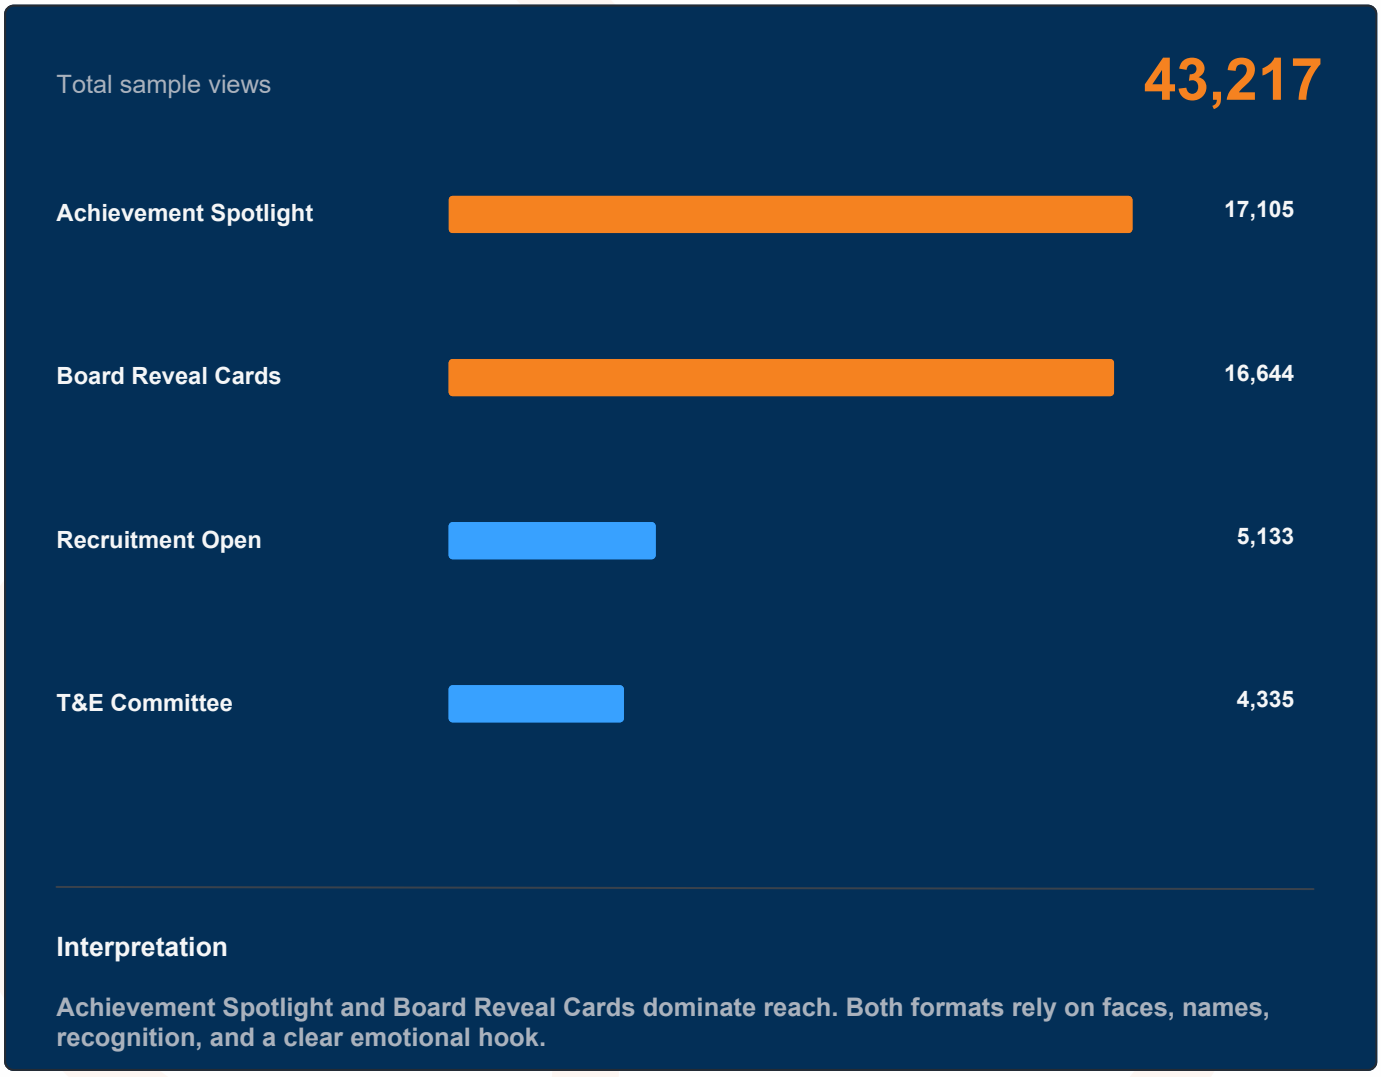
The top two people-focused posts generated 33.7K views, accounting for 78% of total views in this sample.

Best single post: 17,105 views

Report date: October 2026

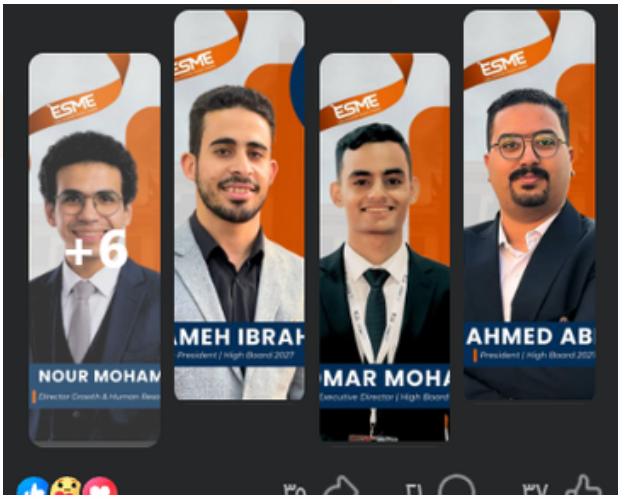
Views Performance

Post-by-post ranking based on the uploaded Meta Insights screenshots.



Top performers preview

17,105 views



16,644 views

Engagement Quality

Actions matter: clicks, comments, shares, and reactions show whether the post moved people to respond.

Post	Views	Interactions	Rate
Achievement Spotlight	17,105	1,056	6.2%
Board Reveal Cards	16,644	517	3.1%
Recruitment Open	5,133	423	8.2%
T&E Committee	4,335	236	5.4%

Action breakdown highlights

754
Highest clicks

41
Highest shares

8.2%
Best rate

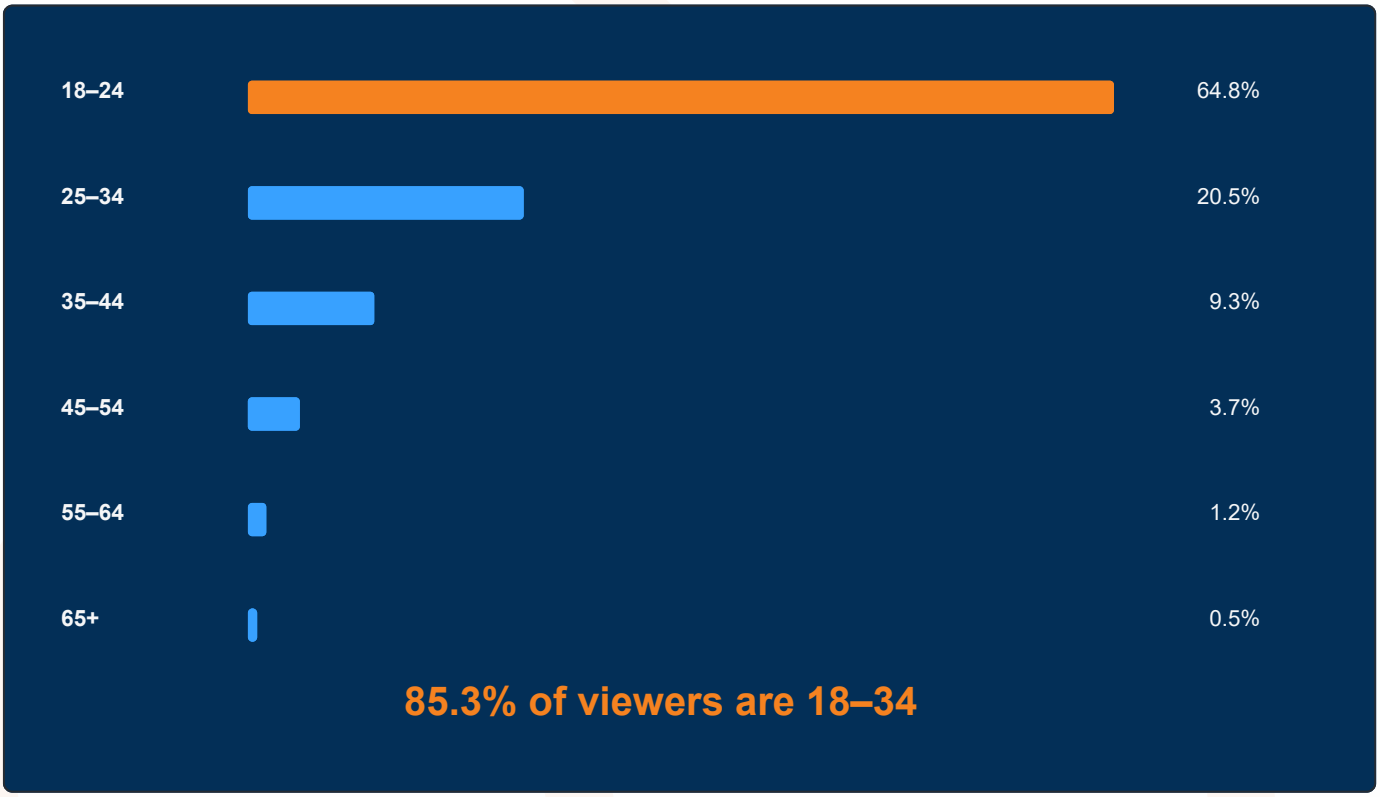
What this means

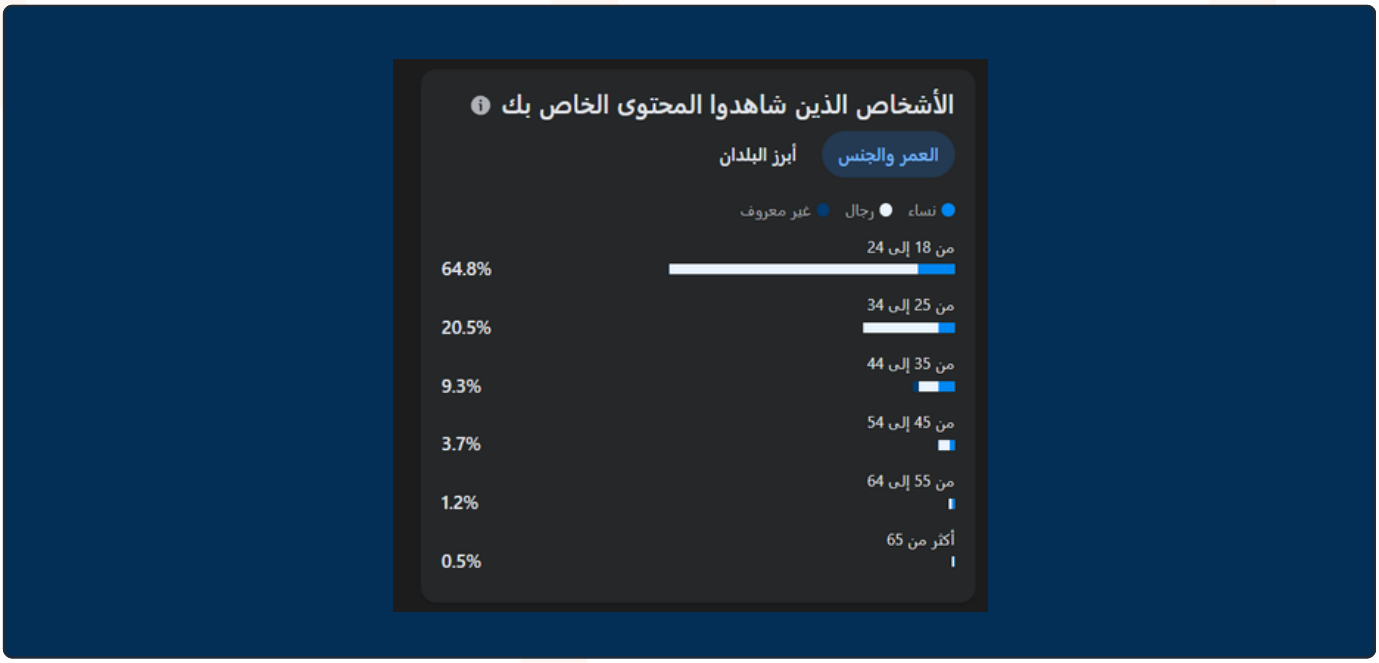
Recruitment Open has fewer views than the top two posts, but it converts better into actions. This makes recruitment content a high-value format when the call-to-action is clear.

Use it when the page objective is applications, registrations, messages, or shares.

Audience Profile

The content is reaching the right student-age audience.





Key implication: the current content direction fits the target audience of Cairo Engineering students aged 19–24. Keep the tone youthful, direct, and visually people-oriented.

Post Snapshot Comparison

A simple view of each post's role in the content mix.

Recruitment Open

5,133 views

423 interactions · 34 shares

Engagement rate: 8.2%

T&E Committee

4,335 views

236 interactions · 41 shares

Engagement rate: 5.4%

ESME Cairo University Student Chapter
BE POSITIVE VALUABLE

Recommended Content Direction

How to repeat the wins and push more views from upcoming posts.

1. Lead with people

Keep using real faces, names, titles, achievements, and team moments. This is the strongest view driver.

2. Make the CTA early

For recruitment and committee posts, place the main action in the first line: apply, comment, share, or message.

3. Turn posts into series

Create repeatable formats: Board Spotlight, Behind the Team, Committee Deep Dive, and Student Opportunity.

4. Optimize for 18–24

Use direct captions, clean contrast, short hooks, and designs that feel like one consistent ESME visual family.

Next reporting step

Track the same KPIs weekly: views, viewers, interactions, engagement rate, clicks, comments, and shares.

Appendix: Evidence Screenshots

Original insight screens used to build the report.

2026-2027

THE VISION 26-27

PRESENTED TO
Zerust

PRESENTED BY
ESME CU Team

ESME-Cairo University

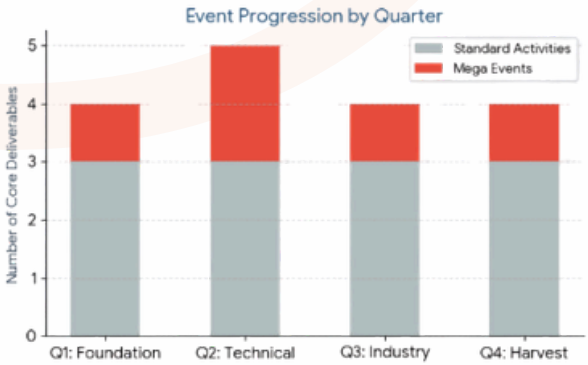
The Vision

"Empowering a Comprehensive Engineering Generation: Bridging the Gap Between Academia and the Industry of the Future"

This year, we aim for ESME CU to be the premier platform that transitions engineering students from the realm of theories to the reality of application. We will focus on modern technologies reshaping the industry, such as Generative and Agentic AI, advancements in Material Science, and Non-Destructive Testing (NDT) techniques, ensuring that the Cairo University graduate is fully prepared to lead innovation in the job market.

STRATEGIC ANALYSIS & FOCUS AREAS

Our strategy for this year is built on careful analysis of industry demands and student needs. The
following charts illustrate our resource allocation and strategic focus areas.



Technical Excellence & Technological Adaptation:

- Launching a series of technical workshops covering materials engineering, mechanical testing, and AI applications in solving engineering problems.
- Preparing members for active participation in student conferences and summits inside and outside the university.

Industry Integration:

- Organizing field visits and attending major industrial exhibitions in Egypt to connect students with top companies and manufacturers.
- Hosting industry experts to deliver lectures that transfer their real-world experiences to our students.

Innovation & Projects:

- Establishing internal competitions (Hackathons or Case Studies) that push students to apply what they have learned in designing solutions for real industrial problems.

Operational Efficiency & Team Building:

- Investing in the internal training and development of chapter members before directing efforts outward.
- Building a culture of teamwork, punctuality, and shared responsibility.

Social Media Marketing Plan

Sector Objective:

- To solidify the ESME Chapter's physical and digital presence and establish a professional visual identity that bridges academia and industry, while implementing the Integrated Work System (IWS) and "Zero Loss Mindset" methodology across multimedia deliverables, designs, and event coverage.

Key Targets:

- 3 field marketing campaigns (offline activations)
- 24 hours of training to develop member competencies
- 24 official posts published (12 technical + 12 general)
- 6 approved design templates (3 magazine + 3 slides)

Key Monthly Deliverables:

- October Main Deliverables: Approval of initial templates (Magazine + Slides) | First field launch and sticker distribution | Full commitment to the 8-post schedule.
- November Main Deliverables: Completion of all 6 approved templates | High digital reach via 4 Reels | Delay-free field coverage.
- December Main Deliverables: Release of the 1st Issue of the Scientific Magazine | Member evaluation via Skill Matrix | 100% organized archiving on Google Drive.

Social Media Marketing Plan

1. Media & Content Committee:

Weekly Publishing Schedule (2 Posts/Wk):
Technical Post: Materials Science & Metallurgy, AI Applications, and NDT Testing.
General Post: Communication Skills, CV Writing, Time Management, and Soft Skills.
Weekly Training Program (2 Hours):
45 Minutes: General training for all chapter committees (Soft Skills & Organizational Culture).
75 Minutes: Specialized MC training (Content Writing, Video Editing, Photography, DMS Analytics).

2. Design Committee:

Scientific Magazine (3 Templates):
Template 1 (Classic): For academic research and articles.
Template 2 (Modern/Visual): High focus on infographics.
Template 3 (Interactive): For quick topics and interviews.
Scientific Slides (3 Templates):
Template 1: Advanced technical workshops and lectures.
Template 2: Chapter introduction and general meetings.
Template 3: Engineering project challenges and competitions.

3. Marketing Committee:

Offline Activation: Direct engagement with Cairo University engineering students, distributing modern sticker designs along with treats/hospitality to build brand recall.
Online Reels: Creating short videos (30–60 seconds) published on Facebook, Instagram, and LinkedIn highlighting behind-the-scenes work and engineering skills.

Social Media Marketing Plan

اللجنة (Committee)	المحور الرئيسي (Scope)	التفاصيل والمهام (Details & Tasks)
1. Media & Content Committee *(Content & Training)*	**Weekly Publishing Schedule** *(2 Posts / Wk)*	• **Technical Post:** Materials Science & Metallurgy, AI Applications, NDT Testing. • **General Post:** Communication Skills, CV Writing, Time Management, Soft Skills.
	Weekly Training Program *(2 Hours)*	• **45 Mins:** General training for all chapter committees (Soft skills & organizational culture). • **75 Mins:** Specialized MC training (Copywriting, editing, photography, analytics, DMS).
2. Design Committee *(Templates & Identity)*	**Scientific Magazine** *(3 Templates)*	• **Template 1 (Classic):** Academic research & articles. • **Template 2 (Visual Modern):** Heavy focus on infographics. • **Template 3 (Interactive):** Quick topics & interviews.
	Scientific Slides *(3 Templates)*	• **Template 1:** Advanced technical workshops & lectures. • **Template 2:** Chapter introductions & general meetings. • **Template 3:** Competitions & engineering project challenges.

اللجنة (Committee)	المحور الرئيسي (Scope)	التفاصيل والمهام (Details & Tasks)
3. Marketing Committee *(Activations & Digital)*	**Offline Activation** *(Field Marketing)*	• Direct engagement with Cairo University engineering students. • Distributing modern stickers along with treats/sweets to reinforce Brand Recall.
	Digital Marketing *(Online Reels)*	• Produce 30–60 second short clips (Reels/Shorts). • Publish on Facebook, Instagram, and LinkedIn highlighting behind-the-scenes and engineering skills.

Cairo University Student Chapter

Technical & Engineering Plan

SEASON PLAN

November 2026 - July 2027

A compressed operating plan for the Technical & Engineering Committee covering external activities, internal capability building, and the quarterly scientific magazine.

4	10	32	3
Major events	**Workshops**	**Pro sessions**	**Magazine issues**
One per quarter	Feb-Jul track	4/month Dec-Jul	Dec, Mar, Jun

Core objective

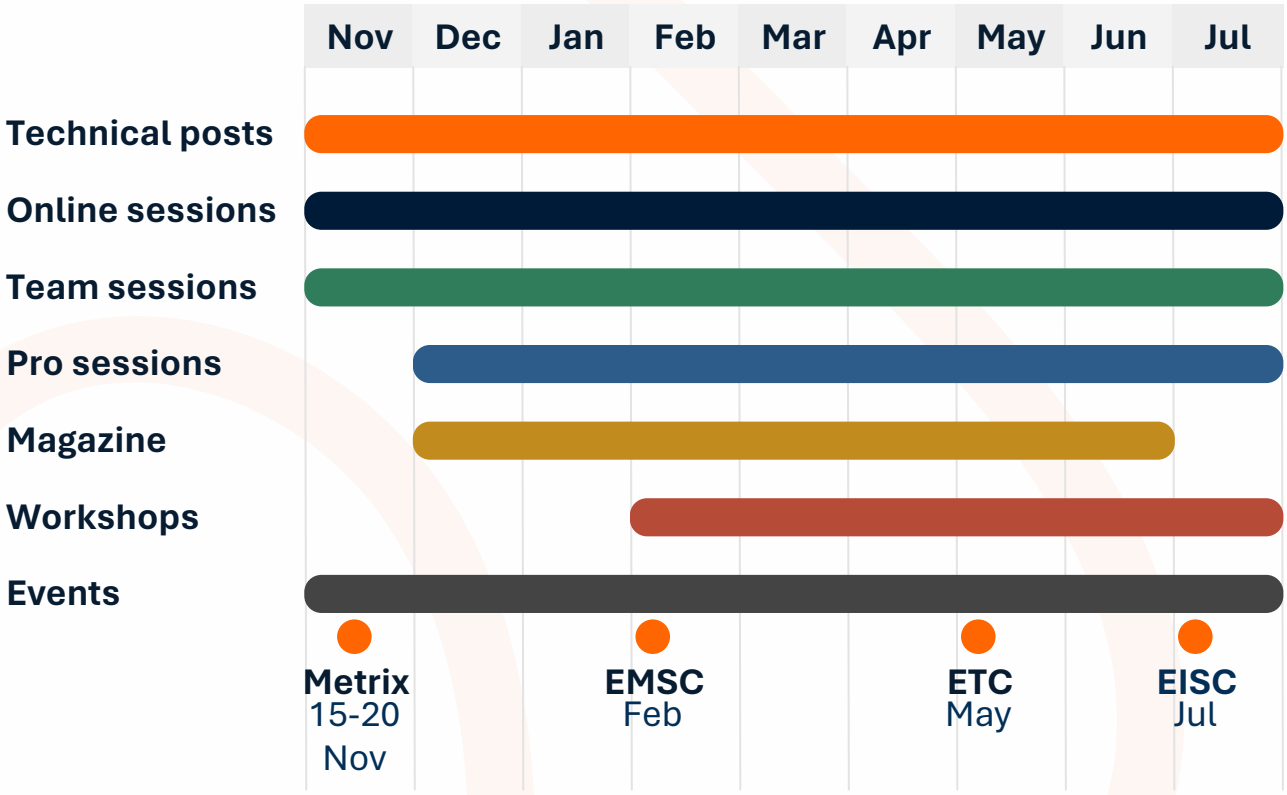
Turn the committee into an engineering learning system that compounds knowledge through events, workshops, weekly sessions and publishable technical outputs.

Operating interpretation

- Nov-Dec: launch the weekly rhythm, publish first magazine issue, and activate Metrix as the opening event.
- Feb-May: deliver the main workshop block, EMSC, ETC, and the second magazine issue.
- Jun-Jul: close capability gaps, publish final issue, and execute EISC as the main industrial event.

Season master calendar: Nov 2026 - Jul 2027

Dates marked as windows are recommended planning periods when only the month was provided.



Weekly | Capability | Events | Magazine

External Technical Program

Workshops, events and professional sessions should be planned as one integrated public-facing track.

Quarterly events

- Q1 — ESME Metrix — 15-20 Nov
- Q2 — EMSC — Feb
- Q3 — ETC — May
- Q4 — EISC — Jul

Workshop track recommendation

NDT / Inspection	2-3 days	**Feb**
Materials Testing	2 days	**Mar**
Automation / AI	3 days	**Apr**
Sustainability	1 day	**May**
ANSYS / SolidWorks	3-4 online sessions	**Feb-Jun**

Recurring public sessions

- Saturday online technical session: 1 hour + activity.
- Professional sessions: 4/month from Dec with speakers, doctors and TAs.

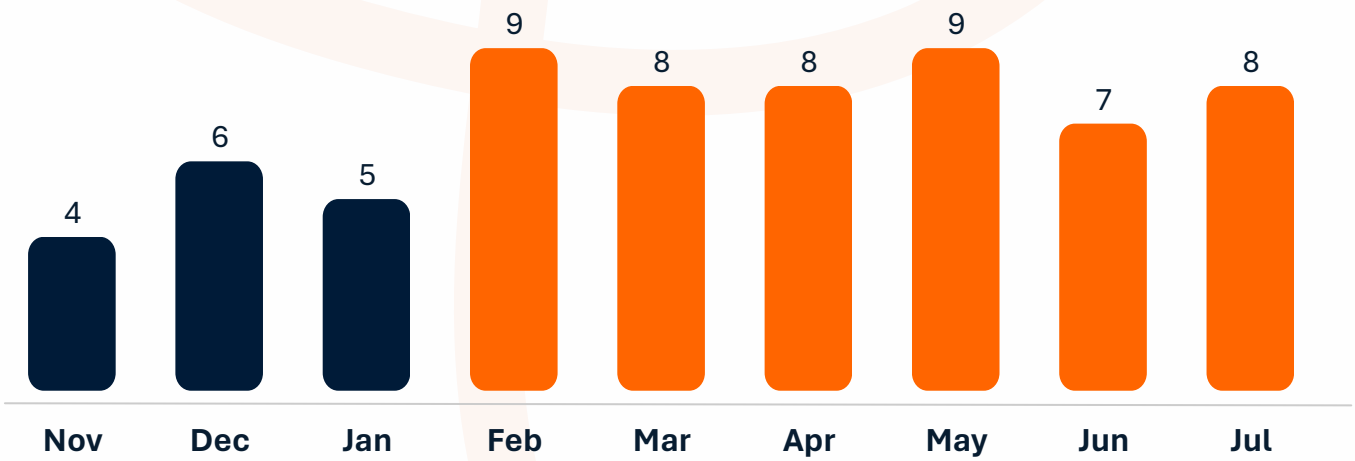
Expected output

- Every session generates reusable notes, questions, or case content.
- Top outputs move into the quarterly magazine.

Activity load control and delivery windows

This view keeps the committee realistic: delivery is concentrated, but preparation starts earlier.

Monthly delivery load



Standard delivery workflow

1	**Scope**	Objective, audience, sponsor fit	2	**Source**	Speakers, trainers, companies
3	**Build**	Content, cases, activity sheets	4	**Deliver**	Event, workshop or session
5	**Capture**	Report, assets, lessons learned			

Recommended control rule

Do not run a major event, a multi-day workshop and a magazine release in the same week unless responsibilities are separated across sub-teams.

Team capability system - IWS-inspired

A weekly learning engine for growth, skill qualification and stable committee performance.

Monthly learning loop

Skill matrix

Weekly team session format

- Cadence: 4 sessions/month from November - one offline bonding/practice day + three online learning sessions.
- Governance: each member owns one micro-output per month (summary, checklist, case note, or presentation).
- Assessment: levels are updated monthly; low-score skills become the next month learning theme.

Target by July: at least 70% of active Technical & Engineering members reach L2+ in core committee skills.

Quarterly Scientific Magazine

A company-academic publication engine that links science, industry and emerging technology.

Release cadence

Dec	Mar	Jun
Issue 01	**Issue 02**	**Issue 03**
Materials & Manufacturing	Inspection & Reliability	Smart Materials & Industry 4.0

Production workflow

Plan	Partner	Write	Review	Publish
Theme + sections	Companies + academics	Articles + sponsor note	Technical + editorial	PDF + social snippets

Partner value

- Sponsor article or expert quote.
- Technical case study visibility.
- Link between brand, students and real industrial knowledge.

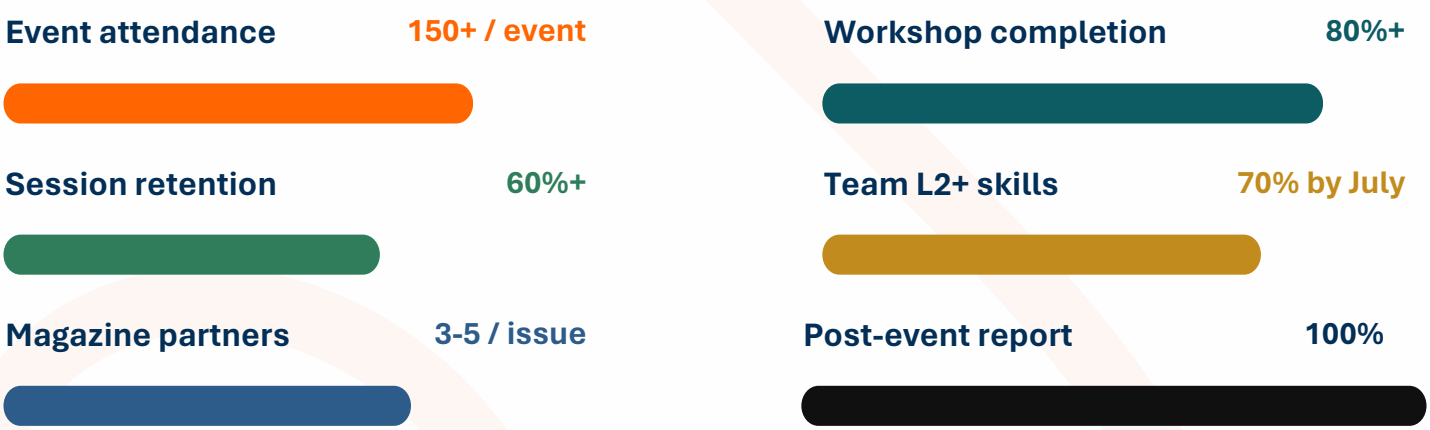
Editorial sections

- Industry article, student research digest, technology brief, R&A/Q&A, career insight.
- Each issue feeds future sessions and workshops.

KPI dashboard and next operating decisions

A compact measurement layer to keep the season sponsor-ready and execution-safe.

KPI dashboard



Operating cadence

- Weekly: committee stand-up to review upcoming session/workshop tasks and blockers.
- Monthly: skills matrix update, activity load review and sponsor/content pipeline review.
- Quarterly: event retrospective, magazine release report and partner impact summary.

Immediate decisions needed

Confirm exact dates for Feb, May and July events; lock the workshop list; assign owners for sessions, magazine, sponsorship, design and reporting.
